Hydrogeological Modellation

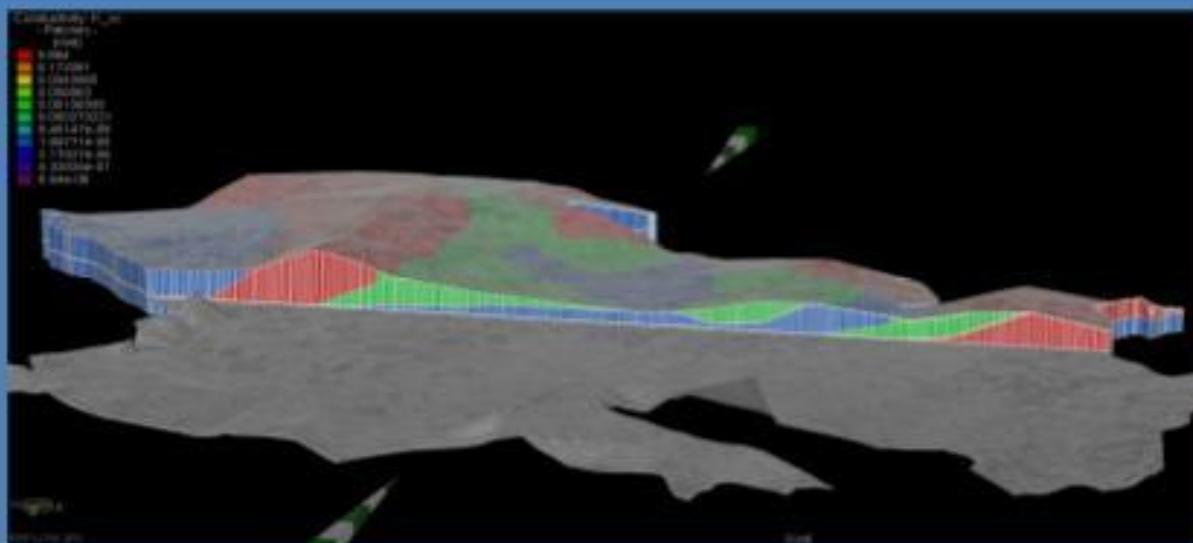

FEFLOW (Finite Element subsurface FLOW system) is one of the most sofisticated numerical cde aviable to model the flow and the trasport in porous media, in conditions saturated and unsaturated.

The modelling platform is equipped with graphical environment, two or three dimensions, which allows you to similate the dynamics of flow underground in complex situations, the transport pf contaminants in the aquifer and the heat transport (ghotermical field).

6. TESTIMONIALS

Date: 09/10/17
Ref.No.Geo/1823/17

To whom it may concern

This is to certify that Megal Water Well Drilling PLC signed an agreement with ADC Development and Research PLC to drill and construct one water supply borehole (240m) in the Lega Tafo area, Oromia Regional State. Geomatrix PLC was assigned as a drilling supervisor by ADC Development and Research PLC.

Currently Megal Water Well Drilling PLC completed the drilling work and pump test.

Geomatrix PLC as a drilling supervisor, followed the work and had been instructing the contractor whenever the need came and found that the drilling and construction of the aforementioned borehole was completed in a short time period even though the starting time was delayed for some reasons.

Finally, wishing you success and hope to have your service in similar projects.

Sincerely,
